

§ SYNC — Buildathon Battle Plan

GROWTHX × RINGG AI VOICE BUILDATHON · SUNDAY JUNE 14 · BIZZHUB ESQUIRE, BLR · PRIZE POOL Rs 3.5 LAKH

The one-line strategy: **the submission is a live, callable Ringg agent — mentors score it by calling it.** Everything on this page serves one outcome: a mentor dials SYNC, asks about a client, asks it to schedule a meeting, and watches the meeting appear in Pipedrive. Brief → act → proof. One outcome, zero fumbles.

The rules that shape everything (from the official handbook)

Rule	Consequence for us
Submission = live callable agent; mentors test 3:30–3:45 PM	The Concierge agent + web-call widget on the dashboard is THE deliverable. It must answer and
Agents must be configured from scratch on the day	We create all agents fresh on Sunday via our setup script (minutes). AI assistants, scaffolding & I
Build window 11:30–3:30; submission 3:15–3:30, no exceptions	Target SUBMIT at 3:15 sharp. Everything after 2:30 is buffer.
Credits = 83 call-minutes (coupon RINGG-BUILDATHON-BLR)	Budgeted below. Verify with curl BEFORE every live call — never debug on the phone bill.
3-minute demo: 30s context · 30s workflow · 90s live · 30s impact	Scripted word-for-word on page 3. Lead with the business problem, never the stack.
Judges score business impact: 'Does it change the outcome?'	The metric we move: revenue-per-RM-hour and churn saves. ROI ledger on screen at open and c

The 'built today' story (say this if asked)

“The voice agent was created from scratch this morning on Ringg — agent, prompt, custom tools, knowledge base, web-call widget, all configured today on the build floor. What we brought is our own tooling: a CRM integration layer and a dashboard, the way other teams bring Supabase or a Next.js starter. The handbook allows helper tools, scaffolding and AI coding assistants — the Ringg build itself happened here, today.”

This is true: on Sunday you will literally run the provisioning script, write the prompt into a fresh agent, attach the tools by hand in Ringg's dashboard, and wire the widget. Do NOT claim the dashboard was built today.

§ The Day, Hour by Hour

BUILD WINDOW IS 4 HOURS. EVERYTHING BEFORE 2:30 IS WORK; EVERYTHING AFTER IS BUFFER.

Time	Action	Done when...
10:00	Check in. Laptop + 2 phones + earbud + hotspot. Open Render, Vercel, Ringg, Pipedrive tabs.	Seated, online
10:30	Kickoff. REDEEM COUPON RINGG-BUILDATHON-BLR IMMEDIATELY (valid 10AM-8PM only).	83 minutes visible
11:30	Create agents FROM SCRATCH: run scripts/setup_ringg_agent.py → 4 fresh agents. Copy new agents into Render env (RINGG_AGENT_ID + VITE_RENDER_WINDOW_ID).	Agents listed in Ringg
11:45	Attach tools in Ringg dashboard per RINGG_TOOLS_SETUP.md: ask_crm + log_action on the Overview (page).	Tool visible on agent ready values in the
12:00	Web-call widget: Ringg dashboard → agent → Embed → copy widget xApiKey → set VITE_RENDER_WINDOW_ID in RINGG_TOOLS_SETUP.md.	Call now visible in dashboard
12:15	Verify WITHOUT credits: the two curl checks in RINGG_TOOLS_SETUP.md (ask_crm + log_action) + two curl checks.	Production + cron calls/status + 'Se
12:30	First real calls (~10 credit-min): widget call → 'Tell me about Vikram' → 'Schedule a meeting'. Then gain 4 PM. Drive check Pipedrive. 7	Meeting in 4 PM. Drive check Pipedrive. 7
1:15	RECORD THE BACKUP: screen-record one perfect widget call end-to-end (phone camera to be handy save locally).	Backup recording ready
1:45	Two timed dry-runs of the 3-minute demo. Trim anything over 2:50.	Under 3:00 twice
2:30	Buffer. Re-seed demo data. Keep Render warm (keep-alive runs every 10 min automatically).	—
3:00	Final verify: one widget call + the two curls. Then STOP TOUCHING THINGS.	All green
3:15	SUBMIT via the floor link. Do not wait for 3:25.	Submitted
3:30–3:45	Mentors call the agent. Keep the dashboard open on the ROI ledger; keep Render warm.	—
4:15	If top 5: stage demo (script on next page). Laptop audio UP, backup video one click away.	—

Credit budget — 83 minutes total

Purpose	Calls × min	Budget
Tool-attachment verification (12:30)	2 × 3	6 min
Briefing / save-call / standup checks	3 × 3	9 min
Backup recording (one perfect take + 1 retry)	2 × 4	8 min
Dry-runs with live call (2 rehearsals)	2 × 3	6 min
Mentor testing window (their calls)	~4 × 4	16 min
Stage demo live call	1 × 3	3 min
RESERVE (never touch before 3:30)	—	35 min

Rule of thumb: if a call fails twice, STOP calling — fix with curls, which are free.

§ The 3-Minute Demo — Word for Word

FORMAT MANDATED BY THE HANDBOOK: 30s CONTEXT · 30s WORKFLOW · 90s LIVE · 30s IMPACT

0:00–0:30 · The problem (no tech words allowed yet)

“Himanshu is a relationship manager with two hundred clients. Before every meeting he spends twenty minutes digging through the CRM — and still walks in blind. While he's busy, his at-risk clients quietly leave for another bank. The CRM knows everything. Nobody has time to read it. That's the problem we lived, and that's what we built for today.”

0:30–1:00 · The workflow (one sentence per surface, dashboard visible)

“SYNC is a Ringg voice agent that sits on top of the CRM — today it's wired to Pipedrive. You call it, or it calls you. It briefs you before meetings, whispers coaching in your ear during live calls, files the commitments it hears as real meetings, and autonomously calls at-risk clients and hands them to you warm. Built on Ringg's agents, in-call transcription, function tools and warm transfer — configured from scratch this morning.”

1:00–2:30 · LIVE (the one outcome: call → answer → CRM write → proof)

On screen: the dashboard, ROI ledger visible, Pipedrive in the next tab. Click the web-call button — audience hears everything.

You say (on the call)	What the room sees/hears
“Tell me about Vikram.”	SYNC answers in ~3 s with the LIVE Pipedrive record: high risk, maxed credit card, missed E
“Schedule a meeting with him for Thursday at 4 PM.”	SYNC confirms aloud. You flip to Pipedrive: a REAL calendar meeting — Thursday, 4:00–4:3
“That's all, thanks.” (hang up)	Dashboard: live feed entry + ROI ledger ticks up. Say: “That call is the product. No screens we

If there is time pressure, this whole segment still works in 60 seconds. If the live call fails ONCE, switch to the backup recording instantly and keep narrating — the handbook explicitly rewards this.

Optional 20-second flex (only if ahead of time): hit ■ Simulations → Save Call tab → let the room hear the autonomous save-call ring-and-transfer moment.

2:30–3:00 · Impact (numbers, then the metric)

“Today, prep takes eighteen minutes per meeting; SYNC does it in forty-five seconds. On this dashboard alone it surfaced eleven lakh rupees of cross-sell and caught five complaints before they escalated. The metric we move is revenue per RM-hour — and churn saves on the calls SYNC makes itself. Next we measure pickup-to-save conversion across a real book of clients. SYNC: your CRM, on the line.”

Judge Q&A; — prepared answers

Likely question	Answer
What did you build TODAY?	The entire Ringg layer: agents, prompts, custom tools, KB, widget — from scratch this morning. The CR
Is the demo scripted?	The call you heard was live — the agent pulled Vikram from Pipedrive in real time and wrote a real mee
Why Ringg specifically?	In-call STT feeds our whisper engine; function tools give the agent hands; warm transfer powers save-ca

What breaks at scale?	Honest answer: per-tenant tool auth and telephony costs. Architecture is multi-tenant already (connection

§ Checklists & Failure Drills

PRINT THIS PAGE. TICK BOXES WITH A PEN LIKE IT'S 1995.

Saturday night (before the day)

- Charge both phones; pack wired earbud + hotspot plan B.
- Backup video on the laptop DESKTOP (not cloud). Test it plays with sound.
- Verify Render env has: RINGG_API_KEY, OPENAI_API_KEY, TWILIO_*, ELEVENLABS_API_KEY, PIPEDRIVE_*, DEMO_*_PHONE.
- Run the two RINGG_TOOLS_SETUP.md curls against prod — both return spoken.
- Hard-refresh dashboard: ROI ledger, ■ Simulations (all 3 tabs), embed panel all work.
- Sleep. The build window is only 4 hours and starts at 11:30.

Sunday morning-of quick wires (the from-scratch run)

- 10:30 sharp: redeem RINGG-BUILDATHON-BLR.
- Run scripts/setup_ringg_agent.py → fresh agents → paste new IDs into Render env → redeploy.
- Ringg dashboard: attach ask_crm + log_action to Concierge (RINGG_TOOLS_SETUP.md), whitelist Vercel domain.
- Embed page → copy widget key → VITE_RINGG_WIDGET_AGENT_ID + VITE_RINGG_WIDGET_KEY on Vercel → redeploy.
- Curl-verify both tools. Then ONE real widget call: brief + meeting + Pipedrive check.
- Record the backup. Then rehearse twice with a timer.

Failure drills (decide now, not on stage)

If...	Then...
Live call fails once on stage	Say “let me show you the call from this morning” → play backup recording → keep narrating over it. Do
Render cold / slow	Keep-alive pings every 10 min automatically; before demo, open /api/healthz once. If down: simulations
Widget won't load	Phone fallback: call the Concierge number (if inbound attached) or trigger an outbound briefing call to y
Agent says 'I can't do that'	Tools detached on the fresh agent — reattach in Ringg dashboard (5 min, doc open). Until then, demo vi
Pipedrive write fails	The two curls tell you instantly whether it's Ringg-side or CRM-side. CRM-side: check PIPEDRIVE_AI
Wifi dies	Phone hotspot. The demo needs only the laptop + one phone.

What NOT to do (handbook's own list)

- ✗ Don't open with the tech stack — open with Himanshu's twenty minutes.
- ✗ Don't tour every feature — one outcome: call → answer → CRM write → proof.
- ✗ Don't claim impact without a baseline — 18 min vs 45 s, on screen.
- ✗ Don't end on architecture — end on the metric and the ask.
- ✗ Don't go past 3:15 without submitting.

Bottom line: you are walking in with the only team whose agent can be CALLED by a mentor, briefed from a live CRM, and asked to write to it — with the receipts visible in Pipedrive seconds later. Protect that one loop. Everything else is decoration.
